URBAN TRANSPORT:

PROBLEMS AND SOLUTIONS

1 Getting around today's cities can be a challenge. Many modern cities have terrible **traffic congestion**. It can take hours to cross the city because there are simply too many cars. Governments and businesses around the world are finding creative ways to solve these problems.

2 In cities like Jakarta, Indonesia, **commuters** may spend four hours in their cars every day. The solution? Add modern technology to the familiar motorcycle. Because they are small, motorcycles can fit into small spaces and move around cars that are stopped in traffic. Motorcycle owners can earn money by taking passengers to their **destinations**. In 2010, a new company began to offer motorcycle rides as an online service using an app. Now Jakarta residents can use their phones to call a motorcycle. It's cheap, safe, reliable and most importantly – fast.

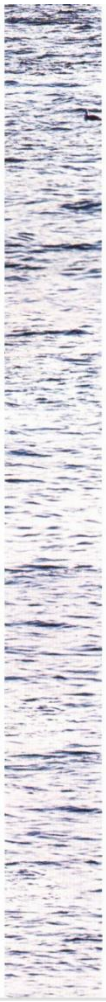

3 Congestion is not the only transport problem in big cities, however. Building roads is expensive. Building a **public transport** system is even more expensive. As a result, communities on the **outskirts** of major cities often have few roads. The challenge is even greater when these communities are high up in the mountains. Without public transport, it is difficult for **residents** to reach the city centre. They don't have **access** to jobs, education or healthcare.

4 A good way to **connect** mountain communities to the city centre is a cable car system, which operates high above traffic. Because they use electricity, cable cars are cleaner than cars and buses that use petrol. They are also less expensive to build than buses or trains. The cars don't go very fast – only about 20 km per hour – but that is often faster than the traffic on the roads below.

5 For people who live in mountain communities with few roads, cable cars make a big difference. One teacher in Bogotá, Colombia reported that it used to take him more than two hours to get to work, often arriving at the school after his students! With the cable car, he can be there in 40 minutes. Cable cars can also bring unexpected changes. Although they are built for residents, tourists love cable cars. In cities like Medellín, Colombia and La Paz, Bolivia, they are bringing tourists to areas of the city that were too far away, or in some cases, considered too dangerous for visitors. Now tourists visit these areas, where they spend money in shops and restaurants.

6 Finally, the best way to get around a city with bad traffic is often walking. But walking in a city on a mountain is hard work. Another creative solution is the outdoor escalator. In Medellín, residents once had to climb uphill for a half an hour (= 28 stories!) to their homes. Today, the escalator ride takes just six minutes. The world's longest outdoor elevator is in Hong Kong. It is 800 m and serves almost 80,000 people every day, including many tourists.

7 Traffic congestion will continue to be a problem in big cities. However, creative solutions like these can help people get around cities more easily. They can also reduce pollution and traffic and attract tourists.

1 Traffic congestion is a serious problem in cities worldwide. There are simply too many **vehicles** competing for too little space. The company TomTom, which does research on traffic in cities worldwide, estimated that in 2015 the average commuter wasted 100 hours during the evening rush hour alone. In addition to wasting people's time, traffic jams have many other negative effects. Therefore, **governments** everywhere are working hard to find solutions to this problem.

2 Traffic jams have negative effects on drivers, cities and the environment. To begin with, they cause stress to drivers, which may lead to health problems or road rage[1]. Traffic jams can also lead to economic losses because products cannot be delivered on time, and employees arrive late for work or meetings. Another negative effect is that **emergency** services can become caught in traffic and are, therefore, unable to get to an emergency in time. Finally, traffic congestion negatively affects the environment. Traffic congestion wastes **fuel**, which in turn produces more carbon dioxide through car exhaust[2] and contributes to the greenhouse effect. Taken together, all these effects have a serious negative impact on the quality of people's lives.

3 Because of these serious effects, it is important for cities and governments everywhere to take steps to reduce road congestion. The most obvious solutions involve **engineering**. This means building more roads with wider lanes so that more cars can travel at the same time, as well as constructing tunnels and bridges to guide drivers around congested areas. However, the costs for engineering solutions are extremely high. Another problem is that more roads may actually result in more traffic. In short, engineering solutions have both advantages and disadvantages.

4 Other, more creative, solutions to the congestion problem are to increase the tax on fuel or to make people pay to travel in the centre of a city or on a motorway. If governments increase the cost of driving, people will think more carefully about using their cars. However, taxing fuel and roads may mean that some people cannot afford to drive their cars, and they may have to give up their jobs. Also, governments may not want to increase the fuel tax too much if the tax is unpopular with voters.

5 A more popular solution, therefore, would be to promote other forms of transport, like ferries, cycling and underground trains. One suggestion is to encourage people to **cycle** more. Although cycling has obvious health benefits and does not pollute the air, it is not **practical** in every climate and can prove dangerous in heavy traffic.

6 Another possibility is to persuade people to use buses, although they are inconvenient for some people. A related option is a park-and-ride system which allows people to drive to the outskirts of cities, park, and then take a bus to the city centre. This allows some flexibility for car drivers and reduces congestion in the centre of the city. A disadvantage for people who work late shifts[3] is that many buses do not run at night.

7 Overall, cities are using a variety of methods to tackle the problem of traffic congestion. Most of the methods have advantages as well as disadvantages. We should encourage alternative forms of transport because they reduce the amount of traffic on the roads and also have a positive effect on the environment.

[1]**road rage** (n) violence committed by angry drivers in traffic
[2]**exhaust** (n) smoke that comes out of a car as a result of burning petrol
[3]**late shifts** (n) work hours that are late in the day or at night

THE PROS AND CONS OF THE ELECTRIC CAR

1 We are on the brink of[1] change for the car industry and countries around the world agree that all cars should be fuelled by an energy source which is more environmentally friendly, such as electricity. Essentially, an electric car is a vehicle powered by a battery, which is charged by an external electricity source. **Unlike** most current cars, which run on[2] fossil fuels, the electric car would not create **extreme** levels of pollution. However, despite this, many countries are delaying this switch to a greener energy source, because whilst this change would bring with it some enormous benefits, it also has some significant **drawbacks**. The following essay will consider both sides of the argument.

2 As already mentioned, perhaps the greatest advantage of electric vehicles (EVs), is that they are kinder to the environment. According to the Mayor of London, road pollution is currently responsible for half the city's air pollution. Unlike gasoline- or diesel[3]-fuelled cars, EVs produce zero exhaust pipe[4] emissions and studies suggest that just one electric car on the road, could save an average of 1.5 million grams of CO2 per year. This idea is further **evidenced** by countries such as Norway, where an increased uptake in the use of EVs has significantly reduced the country's level of carbon emissions.

3 Other advantages of EVs is that they perform well and don't require much **maintenance**. According to many car **manufacturers** EVs now outperform comparable diesel- or gasoline-powered cars. Furthermore, EVs are much quieter than **conventional** cars. Gasoline-fuelled cars are noisy due to the process of **combustion** occurring in each of the engine's cylinders. However, this is not necessary with EVs and therefore by comparison the driving experience can feel much smoother and quieter. Moreover, electric cars are more efficient to maintain. This is because the battery motor will not need oil changes, you will not need to replace engine parts, and generally EVs will not experience the same level of damage over time as a gasoline-fuelled car.

4 However, as with all new technologies, EVs do come with some notable **drawbacks**. One of the major difficulties with **banning** all fossil fuel cars is the cost implication. Although in the long term EVs might be cheaper to run, in the short term EVs are still quite expensive to buy. One of the main reasons for this is that the battery which powers the car is costly. It is the most expensive part of an EV because it is still relatively expensive to produce. However, as battery technologies improve, the price is predicted to decrease in the future.

5 Another significant disadvantage of EVs is that electric cars can travel less distance. The average range for an EV is estimated to be 340 km per charge, whereas some luxury models are able to reach 483 km plus per charge. However, these types of cars are expensive. For example, the Tesla Model X, which provides approximately 542 km of range, has a starting price of about £90,000. By comparison, the average gasoline or diesel vehicle can reach 483km on a full tank, and more fuel-efficient cars can achieve a much further distance. Fuelling an all-electric car can also be problematic. Fully recharging the battery pack can take up to eighty hours, and even fast charging stations can take 30 minutes to charge to 80% capacity. The location and availability of EV charging points is also a concern for those wanting to purchase an electric car. Although the EV charging infrastructure is expanding all the time, in many countries charging points are still not sufficiently accessible. Consequently, owners of EVs must plan their journeys carefully.

6 In conclusion, whilst owning an EV is clearly much better for the environment and will most probably become mandatory in the future, currently the initiative is still experiencing teething problems. However, once these technologies have been developed further, then EVs will have a very positive impact on societies worldwide.

[1]**on the brink of** (idiom) it is likely that a situation will happen soon

交通类词伙 - 自己总结

序号	中文	英文
1	交通拥堵	traffic congestion
2	通勤者	commuter
3	高峰期	rush \ peak hour
4	路怒症	road rage
5	生产更多的二氧化碳	produce more carbon dioxide

6	汽车尾气	car exhaust
7	郊区	Outskirts
8		
9		
10		
11		
12		

逻辑链条：

交通堵塞带来的问题

1. 损伤经济 Traffic problems can damage the economy\ leads to economic losses – 迟到 commuters will be late for work or meetings –损伤效率 undermine their productivity –拥堵 roads are congested-物流很难 it is difficult for vans and other vehicles to deliver goods to different parts of the cities\ cannot deliver products on time –影响销量 affect the sales of companies
2. 给开车的人带来压力 cause stress to drivers --路怒症 road rage -- 健康问题 health problem
3. 紧急服务陷入了交通堵塞中 emergency service can become caught in traffic --- 不能及时救援 unable to get to an emergency in time
4. 油价 oil consumption will increase – 经济负担 financial burden
5. 影响环境 affect the environment -- 交通拥堵 traffic congestion ----- 浪费燃料 waste fuels - 通过汽车尾气产生更多的二氧化碳 produce more carbon dioxide through car exhaust -- 温室效应 greenhouse effect
6. 迟到 Late for work or schools – 影响心情 affect people's mood –发脾气 people who get stuck in a traffic jam can lose temper easily --- 超速、闯红灯 drive through traffic lights and exceed the speed limit –路怒 road rage will also surge 不守时 people are unable to keep their appointments and get to some place on time --- 事故 traffic accidents will increase

交通堵塞的原因：

1. 堵车的原因是因为有车的人变多 the main reason for traffic congestion is that car ownership has increased significantly ---- 人们收入提升 people now earn

higher salaries in the city --- 买得起车 are able to afford a car – 开车成为主要的出行方式 driving cars has become the main means of travel – 高峰期就开始堵车了 traffic jams are especially serious during the morning and evening rush hour – 补充：尤其是去市中心 when people drive to the city center

2. 交通基础设施太差 – poorly – designed transport facilities are possibly another reason why people today rely on driving -- 城市的道路太狭窄 city roads are too narrow 没有自行车道 there are no lanes for cycling – people do not feel safe to cycle to work ---- 交通的连接度不够 transportation links are not well –developed ---出行不容易 meaning that it is not easy for people to get to work by trains or metros. --- 结果： There are more cars on the road –堵车 it is not unusual for people to get stuck in a traffic jam every day.
3. 城市变大 another reason is that cities are expanding\ urban sprawl ---人们住在了郊区 people have to live in outer suburbs ---房价低 they choose to live in the suburbs as housing is more affordable --- 通勤成为问题 commuting is a problem since they have to drive to work every day ---- 通向市中心路线很少 in cities which only have several main roads leading to the city center – 堵车成为日常 traffic congestion is an everyday occurrence

解决交通拥堵的方式：

1. 建立方便的公共交通系统 the improvement of public transportation services – 缓解交通压力 can be a solution to traffic congestion ----如果人们能够出行 get around 可以依靠地铁和公交车 by taking the metro or bus, 他们就有可能不开车 be less likely to travel by car --- 住在不同的社区人们 people living in different communities 可以很方便的搭乘 have access to public transport 火车 trains 可以带他们去城市的每个地方 take them to various parts of a city --- 公共交通 services 能够准时 on time\ punctual adj. – punctuality n., 可靠 reliable adj. – reliability n., 实惠 affordable adj. – affordability n. –人们才会选择公共交通 turn to these modes of transport (递进, 并列 besides, in addition, also, too, as well)
2. 宣传其他的交通方式 promote other transport \ encourage alternative forms of transport- 比如说轮渡 ferry\ 单车 cycling \ encourage people to cycle more

   a park - and - ride system - allow people to drive the outskirts of cities, park and then take a bus to the city - 灵活度 allow some flexibility for car drivers - 缓解拥

堵 reduce congestion in the centre of a city

3. 让开车变得很贵 make driving expensive – 增加燃油税 the fuel tax can be increased \ increase tax on fuel– 因果论证：驾驶员必须每个月花更多的钱在 motorists have to pay more for fuel costs every month – 并列关系：高峰期\进入市中心征收交通拥堵税 some cities may also impose congestion tax\ charges in rush hours \ so drivers have to pay extra fees when they enter the urban center\ people pay to travel in the centre of a city on a motorway – 结果： 不鼓励开车 discourage \ deter people from driving \ people will think more carefully about using their cars
4. 工程 engineering ---- 修路、扩路 building more roads with wider lanes\ building and broadening roads can also solve the traffic gridlock(交通全面堵塞)a traffic jam affecting a whole network of intersecting streets) –宽广的道路可以容纳更多的车 broad roads can accommodate more vehicles at a time \more cars can travel at the same time --- 可以建环形路 ring roads， 快车道 motorways\ 行车道 carriage way\超车道 overtaking lane 还有其他的道路 other roads to be built --- 驾驶员可以通过不同的路线去商业区 go to Central Business District (CBD) by taking different routes.\ 建立隧道和桥梁 constructing tunnels and bridges -- 绕行拥挤区 guide drivers around congested areas
5. 提升人们的意识 raise people's awareness of – 遵守规则 obey the rules \ regulations – 倡导低碳出行 advocate the low carbon travelling

6. 减少污染的话可以写新能源车

新能源 new environmentally friendly energy such as solar energy was developed and widely used –缓解污染 reduce \ lessen the pollution \ contamination

electric cars 的逻辑链条 - 环保（如果题目没有出现污染问题就不能用）：

环保 environmentally friendly \ are kind to the environment -- 用电 powered by a battery \ an external electricity source --- 不是化石能源 do not run on fossil fuels - 进一步有的解释柴油汽油车 gasoline - or - diesel - fuelled cars -- 无废弃排放 produce zero exhaust pipe emissions --不会产生很大的污染 will not create extreme levels of pollution

7. 公司 Company --- 家庭友好型举措 Develop family friendly policy - 没有紧急事情 work away at home if there are no urgent things--- 线上办公 online work---

灵活的工作时间 flexible working hours: 9-5 schedule\10-6, 5 days' work – cut - 4 days' work

延伸出来的小话题： 四天工作制的利弊

支持四天工作制

In the United States, employees typically work five days a week for eight hours each day. However, many employees want to work a four-day week and are willing to accept less pay in order to do so. A mandatory policy requiring companies to offer their employees the option of working a four-day workweek for four-fifths (80 percent)of their normal pay would benefit the economy as a whole as well as the individual companies and the employees who decided to take the option.

The shortened workweek would increase company profits because employees would feel more rested and alert, and as a result, they would make fewer costly errors in their work. Hiring more staff to ensure that the same amount of work would be accomplished would not result in additional payroll costs because four-day employees would only be paid 80 percent of the normal rate. In the end, companies would have fewer overworked and error-prone employees for the same money, which would increase company profits.

For the country as a whole, one of the primary benefits of offering this option to employees is that it would reduce unemployment rates. If many full-time employees started working fewer hours, some of their workload would have to be shifted to others. Thus, for every four employees who went on an 80 percent week, a new employee could be hired at the 80 percent rate.

Finally, the option of a four-day workweek would be better for individual employees. Employees who could afford a lower salary in exchange for more free time could improve the quality of their lives by spending the extra time with their families, pursuing private interests, or enjoying leisure activities.

反对四天工作制

Offering employees the option of a four-day workweek won't affect the company profits, economic conditions or the lives of employees in the ways the reading suggests.

First, offering a four-day workweek will probably force companies to spend more, possibly a lot more. Adding new workers means putting much more money into providing training and medical benefits. Remember the costs of things like health benefits can be the same whether an employee works four days or five. And having more employees also requires more office space and more computers. These additional costs would quickly cut into company profits.

Second, with respect to overall employment, it doesn't follow that once some employees choose a four-day work week, many more jobs will become available. Hiring new workers is costly, as I argued a moment ago. And companies have other options. They might just choose to ask their employees to work overtime to make up the difference. Worse, companies might raise expectations. They might start to expect that their four-day employees can do the same amount of work they used to

读写互选 六通关素材海报帮你搞定雅思大作文

do in five days. If this happens, then no additional jobs will be created and current jobs will become more unpleasant.

Finally, while a four-day workweek offers employees more free time to invest in their personal lives, it also presents some risks that could end up reducing their quality of life. Working a shorter week can decrease employees' job stability and harm their chances for advancing their careers. Four-day employees are likely to be the first to lose their jobs during an economic downturn. They may also be passed over for promotions because companies might prefer to have five-day employees in management positions to ensure continuous coverage and consistent supervision for the entire workweek.

解决绝对词的题目 - 3 选 1

Increasing the price of cars and petrol is one of the best ways to solve growing traffic and pollution problems. To what extent do you agree or disagree?

The best way to solve traffic congestion is to provide free public transport 24 hours a day, seven days a week. Do you agree or disagree?

Some people think that strict punishments for driving offenders are the most important way to reduce traffic accidents. Others, however, believe that other measures would be more effective in improving road safety. Discuss both views and give your opinion.
