写作训练营 day 9

建筑类

The restoration of old buildings in major cities in the world spends numerous government expenditure. This money should be used in new housing and road development. To what extent do you agree or disagree?

Too much money has been spent on looking after and repairing old buildings, therefore, we should knock down old buildings and build modern ones instead. To what extent do you agree or disagree?

Some people think “vertical city”, where people live and work in high buildings is the best. Others think “horizontal city” is better, where there are few tall buildings. Discuss both views and give your own opinion.

In some cities, there is less control over the design and construction of new homes and office buildings. People can build in whatever style they like. Do you think the advantages outweigh the disadvantages?

Some people believe that certain old buildings are more worth preserving than others. Which types of old buildings should be preserved? Do you think the advantages of preserving old buildings outweigh the disadvantages?

外刊补充

1 Everywhere I look, there are new buildings under construction. The neighbourhoods that I knew as a boy, filled with beautiful old buildings, have mostly disappeared, and in their place, **anonymous**, modern, high-rise buildings have appeared. If we continue in this way, nothing will remain of our heritage; soon I will no longer recognize my city. What is left of the city's traditional buildings and neighbourhoods must be preserved and it is imperative that this process begins now.

2 Historic preservation has become popular all over the world in recent years, but many countries around the world have **opted for demolition** and new construction over preservation. There is good reason for this; as the population has become more **affluent**, residents want all the conveniences of modern living. However, the built environment[2] should be more than shiny new buildings with air conditioning and washing machines; it should also reflect the beauty of our culture and heritage. How can our children understand and maintain their cultural identity if we erase so much of the physical evidence of it? Will they recognize a *barjeel*, the wind towers that once provided natural air conditioning for buildings all over the region? Will they understand the significance of *mashrabiyas*, the delicately carved wooden windows that provide a screen against the outside world? Not if they have all disappeared.

3 The arguments for preserving historic buildings are not simply about an emotional attachment to the past. There are also good economic arguments in favour of preservation. The **renovation** and preservation of historic districts can become an economic engine, drawing tourists and small businesses to the area. There are several good examples of this in the Middle East. In Dubai, the historic *Al Bastikiya* district draws thousands of tourists every year from all over the world. It also attracts local residents, eager to learn about their city's past. In Bahrain, the hundred-year-old *Beit al Jasra* was at one time the summer home of a sheikh[3]. It has been beautifully restored and is now a centre for traditional crafts, such as rug weaving and basket making. International visitors are not only interested in shopping centres; they also want to learn about our culture and traditions like these.

4 *Al Bastikiya* and *Beit al Jasra* are successful tourist attractions with exhibits, galleries and boutiques. Renovated for this purpose, they are not intended to be functioning communities for local residents. However, it is also possible to preserve old buildings and adapt them for reuse by the local community. In Bahrain, buildings in a historic district of the city of Muharraq have been restored, and today they are part of a **vibrant** neighbourhood of homes, small shops and businesses contributing to the nation's economy.

5 Some opponents of historic preservation have argued that it is too expensive, but many recent projects all over the world have demonstrated that this is not necessarily the case. In fact, renovation of an existing structure for **adaptive** reuse can cost about £40 per square metre less than even the most basic new construction, while preserving the beauty of the original building. And, although it is often claimed that old buildings have a more significant environmental footprint[4] than new construction because they aren't very energy efficient, architects and environmental experts maintain that the greenest building is the one that is already built. New construction almost always has a more serious environmental impact because it requires the use of all-new materials that must be transported, often over long distances, instead of recycled materials that are already on site. We recycle so many other things. We can and should recycle buildings, too.

6 Historic preservation is an option that opens many possibilities; demolition, in contrast, is **irreversible**. Once these treasures are lost, they are lost forever, an important link in our heritage that can never be recovered.

word lists

under construction	正在修建中	默写	考 核 频率
autonomous	adj. 自治的		2
anonymous	adj. 匿名的	an: no + nym: name + ous: adj.	
high - rise buildings	高楼大厦		

vertical cities	垂直的城市		
skyscrapers	摩天大楼		
heritage	遗产		
cultural heritage	文化遗产		
it is imperative that	..... 是必要的 .....刻不容缓		
opt for a over b	选择 a 而不是 b		
demolition	n. 拆除 demolish		1
knock down	v. 拆除		
there is good reason for this			
affluent	adj. 富裕的		
shiny	adj. 有光泽的 shiny leaves		
erase	v. 摩擦、移除	eraser 橡皮	
erase \ erode one's cultural identity	失去了身份认同		
maintain one's cultural identity	维持身份认同		
renovation	翻修		
draw tourists	吸引游客		1
draw small businesses	吸引小生意		
economic engine	经济引擎		
gallery	美术馆		
exhibit	v. 展览		
boutique	n. 时装店		
anonymous	adj. 匿名的		
irreversible	adj. 不可以逆转的		

the world in recent years, but many countries around the world have **opted for demolition** and new construction over preservation. There is good reason for this; as the population has become more **affluent**, residents want all the conveniences of modern living. However, the built environment[2] should be more than shiny new buildings with air conditioning and washing machines; it should also reflect the beauty of our culture and heritage. How can our children understand and maintain their cultural identity if we erase so much of the physical evidence of it? Will they recognize a *barjeel*, the wind towers that once provided natural air conditioning for buildings all over the region? Will they understand the significance of *mashrabiyas*, the delicately carved wooden windows that provide a screen against the outside world? Not if they have all disappeared.

拆解一下逻辑结构

为什么老建筑会消失?

选择新建筑而不是老建筑 opt for demolition and new construction over preservation -- 原因：便利度 convenience --- 具体展开：人们有钱 residents have become more affluent ---- 新建筑有空调、洗衣机 residents build shiny new buildings with air conditioning and washing machines ---

保护老建筑的原因：

后果：老建筑在消失 old buildings are disappearing --- 老建筑是文化的载体 carrier of cultural heritage -- 没有老建筑很难维持文化认同 cannot maintain the cultural identity if we erase so much of the physical evidence -- 特别是下一代，小孩子 younger generation --- children ，对于老一代 old generation ：情绪上的依恋 emotional attachment ---举例论证 ：风塔 wind towers -- 提供自然的空调 provide natural air conditioning for buildings

The arguments for preserving historic buildings are not simply about an emotional attachment to the past. There are also good economic arguments in favour of preservation. The **renovation** and preservation of historic districts can become an economic engine, drawing tourists and small businesses to the area. There are several good examples of this in the Middle East. In Dubai, the historic *Al Bastikiya* district draws thousands of tourists every year from all over the world. It also attracts local residents, eager to learn about their city's past. In Bahrain, the hundred-year-old *Beit al Jasra* was at one time the summer home of a sheikh[3]. It has been beautifully restored and is now a centre for traditional crafts, such as rug weaving and basket making. International visitors are not only interested in shopping centres; they also want to learn about our culture and traditions like these.

The arguments for doing sth. are

The arguments for doing sth. are not simply ..... there are also good xxxx arguments in favor of xxxxxx

There are good arguments in favor of xxxxxx

要保护老建筑 preserving historic buildings -- 理由： 经济上： there are also good economic arguments in favor of preservation -- 展开 ： 翻修老建筑是经济上的引擎 the renovation and preservation of historic districts can become an economic engine ---阐述： 吸引游客 draw tourists, 吸引小生意 draw small businesses -- 消费 consume: hotels\ restaurants\ souvenirs -- 纳税 contribute to taxes

要保护老建筑 restoration of old buildings --- 吸引游客 attract tourists from all over the world and local residents--- 学习这个城市或者建筑的历史 eager to learn about their city's past --- 学习文化和传统 learn about the culture and traditions -- 复苏传统行业 restore traditional craft -- 举例： rug weaving\ basket making

Al Bastikiya and *Beit al Jasra* are successful tourist attractions with exhibits, galleries and boutiques. Renovated for this purpose, they are not intended to be functioning communities for local residents. However, it is also possible to preserve old buildings and adapt them for reuse by the local community. In Bahrain, buildings in a historic district of the city of Muharraq have been restored, and today they are part of a **vibrant** neighbourhood of homes, small shops and businesses contributing to the nation's economy.

拆解到上一段话中

要保护老建筑 preserving historic buildings -- 理由： 经济上： there are also good economic arguments in favor of preservation -- 展开 ： 翻修老建筑是经济上的引擎 the renovation of preservation of historic districts can become an economic engine ---阐述： 吸引游客 draw tourists, 吸引小生意 draw small businesses -- 尤其是展会，艺术馆，时装店 exhibits, galleries and boutiques --- 消费 consume: hotels\ restaurants\ souvenirs -- 纳税 contribute to taxes - 有利于当地的经济 contribute to the nation's economy

单独写一个

保护老建筑 preserve old buildings - 改建 renovate -- 不闲置，配套社区 function communities for local residents --- 改造再使用 adapt them for reuse by the local community - inject vitality \ vigor

Some opponents of historic preservation have argued that it is too expensive, but many recent projects all over the world have demonstrated that this is not necessarily the case. In fact, renovation of an existing structure for **adaptive** reuse can cost about £40 per square metre less than even the most basic new construction, while preserving the beauty of the original building. And, although it is often claimed that old buildings have a more significant environmental footprint[4] than new construction because they aren't very energy efficient, architects and environmental experts maintain that the greenest building is the one that is already built. New construction almost always has a more serious environmental impact because it requires the use of all-new materials that must be transported, often over long distances, instead of recycled materials that are already on site. We recycle so many other things. We can and should recycle buildings, too.

反驳句 some opponents\ critics of xxxx have argued that ..... + 解释说明

critics of xxxxx say\ claim that ..... + 解释说明

but this is not necessarily the case.

不应该保护老建筑 historic preservation --- 太贵了 expensive -- 翻修老建筑比新修建筑还贵 renovation of an existing structure for adaptive reuse can cost more than new building + why?

老建筑对环境有影响 old buildings have a more significant environmental footprint than new construction --- 能源使用无效率 not energy efficient 对比 now -- function: green buildings -- 建筑材料的运输 some materials must be transported over long distance - 二氧化碳 carbon dioxide 老建筑对环境影响大 have a serious environmental impact

反着说

翻修老建筑比新修建筑便宜 renovation of an existing structure for adaptive reuse can cost less than even the most basic new construction -- why?

保留老建筑的美观 preserve the beauty of the original building

新建筑对环境影响大 new construction has a serious environmental impact --- it requires the use of all- new materials that must be transported , often over long distance --- 老建筑： 回收 recycled materials are already on site

We need more green buildings

1 In recent years, there has been a general trend for new buildings to be more environmentally friendly, or more 'green'. Such a building is sometimes called an eco-building. These buildings use energy and water efficiently, which reduces waste and pollution. However, installing features like solar panels and water-recycling systems involves higher construction costs than in a traditional building. Despite these extra costs, green buildings are good for the planet and their benefits are clear.

2 In New Mexico, in the US, there are homes called Earthship houses, constructed from recycled bottles, tyres, aluminium cans and other garbage. Often the cans, bottles and tyres are filled with soil and then the outsides are covered with natural mud. These homes are designed to use solar power – the energy from the sun – rather than electricity produced from fossil fuels[1]. These recycled-construction designs are just as **relevant** for other types of buildings. In both Uruguay and Sierra Leone, for example, there are recycled-construction schools for local children.

3 In the UAE, the Zulekha Hospital in Sharjah was the first Middle Eastern building to be awarded 'platinum certification' by the Green Building Council. They received this by meeting various green requirements, including sustainability, water and energy efficiency and indoor environmental quality. The hospital executives researched ways to make the hospital green during the construction phase of the building, and numerous features were put into the design to make it sustainable and show their commitment to the environment.

4 Another example of an eco-building is a private residence in Wales known as the 'Hobbit House'. Its frame is made of wood and the walls are made of straw, which provides excellent insulation. The roof consists of mud planted with grass, which keeps heat in and has a low impact on the environment. Solar panels provide electricity for lighting and electrical equipment. Water is supplied directly from a nearby river and is also collected from the roof for use in the garden, avoiding the need to waste clean water. Low-impact houses like this one are green because they use **second-hand** materials and do not rely on fossil fuels, but instead use renewable energy sources such as solar or wind power.

5 Critics of these kinds of eco-buildings say that while they may be good for the environment, there are practical problems with their affordability. They are often too costly to become a large-volume method of construction. There are further concerns over their long-term **efficiency**. Not much energy can be realistically generated by solar panels in places which do not have large amounts of sunlight, and not every location has access to a natural water source. However, overall, green buildings are worth it. Yet, in order to finance environmentally friendly construction and produce an affordable building, **compromises** have to be made. These may be that the building will have to be smaller or made of less **durable** materials and with technology which uses more energy. Perhaps these compromises are easier to make for schools, where ideas about **conservation** are useful for education, or for businesses where ecologically aware features are a useful marketing tool, rather than for private homes.

6 The argument for constructing green buildings is clear. According to the United Nations, material resource use in the construction **sector** is expected to reach nearly 90 billion tonnes very soon, and may more than double by 2050. Without greater resource efficiency, sustainable development goals will not be reached. We need to be wise about how we use these resources for the good of the planet. However, it remains to be seen whether we are able to accept the financial and practical compromises of producing and living in environmentally friendly buildings.

platinum n. 白金

主题： green buildings\ eco-building

definition: new buildings to be more environmentally friendly --- these buildings use energy and water efficiently , which reduces waste and pollution

advantages	disadvantages	solution
对地球友好 green buildings are good for the planet -- 用太阳能而不是化石能源 these homes are designed to use solar power rather than electricity produced from fossil fuels -- 能源效率高 energy efficiency --可持续发展 sustainable development	经济问题 financial problem 节能设备贵 installing features like solar panels and water -recycling systems involves higher construction costs than in a traditional building --- 买不起 practical problems with their affordability	资助环境友好型的建筑 finance environmentally friendly construction -- 制造出来可以买得起的房子 produce an affordable building -- 房子要小 buildings will have to be smaller - 房子材料不耐用 made of less durable materials --- 不要用于私宅 private homes -- 用在学校 school -- where ideas about conservation are useful for education -- 可以用在公司 business --- 作为一个有用的营销具 where ecologically aware features are a useful marketing tool
用干草做的墙 walls	实操问题 practical	

made of straw + 木头框架 the frame is made of wood -- 很好的隔热 provide excellent insulation -- 房顶 roof 上有草 the roof consists of mud planted with grass -- 隔热 keep heat in ---- 水供应 water supply -- 来自于附近的水域 nearby water --- 花园使用 use in the garden --避免浪费 avoid the need to waste clean water -- 对环境友好 be good for the environment	problems 长期效能 there are further concerns over their long-term efficiency ---- 不是所有的地方都有新能源 not much energy can realistically generated by solar panels in places which do not have large amounts of sunlight --- 不是所有的住宅附近都有水源 not every location has access to a natural water source	

其他素材补充：

保护老建筑的好坏处：

古建筑 old buildings -- 漂亮 beautiful, well constructed buildings -- 象征文明社会 a symbol of civilized society --- 名声名誉好 reflect well on a business or the reputation of the owner -- 对比论证 丑房子： ugly public buildings --- 负面形象 project a negative image of the organization --- 人心情不好 ： working or living in an ugly place creates a depressing and uninspiring environment --- 美房子 attractive buildings -- 让人开心 make people feel happier and increase their motivation to work

保护老建筑 The protection of old buildings-- 保护国家的财产 protect the country's heritage and 保护国家的历史 preserve a country's history. 建筑风格 These buildings may be examples of the architectural style of a country, 展示了不同文化对于宏伟建筑的定义 showing how a visually spectacular building is defined in this culture. People in the modern world can see the unique features of architectural traditions of a specific area such as the design of 柱和梁 columns and pillars, 建筑材料的选择 the selection of building material and 装饰的艺术 the art of decorations. 生活方式、社交活动、打造社区 Additionally, buildings can give an insight into how architecture supported lifestyles, social activities and community life of people living in the past. 如果被拆除 If old structures are demolished. 年轻人没有机会机会欣赏祖先的建筑成就 younger generations would not have the opportunity to appreciate architectural achievements of their ancestors in the future.

保护老房子 the protection of old buildings ---- 地标建筑 landmark \ iconic buildings – tourists attractions 旅游景点 ----- 这些建筑给城市增添了特色 give character to the city, 游客们喜欢在这些标志性建筑前拍照 love taking photos。-------他们可以很容易地通过像埃及金字塔 pyramid 这样的建筑奇观 architectural wonders 来识别城市或国家 identify cities or countries。旅游业的收入 the revenue of the travel industry 不仅为当地人提供了就业机会 job vacancy\ positions, 而且还确保了政府为这些历史景点的维修和维护提供资金 repair and maintenance of these historical attraction, 这可能非常昂贵 expensive\ costly。

不保护老建筑

保护老建筑------浪费钱 a waste of money\ a waste of public money---- 增加政府的费用 increase the cost of government 一些结构可能是几十年甚至一个世纪 century 前建造的, 因此它们不符合安全标准 cannot meet the safety standard, 而且大部分可能由于不适合实际使用 no practical needs 而被废弃 disused 。-----它们很可能在台风 storm 和暴风雪 snowstorm 等极端天气 in extreme weather conditions 条件下倒塌 collapse。----- 翻修 renovation 它们是昂贵的, 或者不需要去翻修, 因为它们在历史上或者文化上不认为是重要的 historically and culturally unimportant。利用公共资金进行翻修毫无意义 make little sense。

保护老建筑---占用土地 occupy valuable land of inner city areas ----影响城市发展 hinder the development of a city 如果房产是私有的 privately owned\ possessed，市政府很难重新开发这些地区 redevelop these areas。---如果这些建筑没有被拆毁 knock down\ pull down\ tear down，城市中心就不能用现代化的摩天大楼 skyscraper 来取代它们，用于住宅或商业用途 for residential or commercial use。----没有商业综合体 business complexes 和高层公寓楼 high-rise apartment blocks，城市就无法轻易吸引投资者 investor、企业家 entrepreneurs 和专业人士 experts\ professions。它没有城市扩张 urban expansion 所需的人力 manpower\ human resource 和资本 capital。

English version

Another problem of protecting old buildings is that these buildings can occupy valuable land of inner city areas and hinder the development of a city. It is difficult for the city council to redevelop these areas, if properties are privately owned. If these buildings are not tron down, the urban center cannot replace them with modern skyscrapers for residential or commercial use. Without business complexes and high-rise apartment blocks, a city cannot attract investors, entrepreneurs and professionals easily. It does not have manpower and capital for urban expansion.

建筑其他话题:

房屋紧缺的问题

住房紧缺 housing shortage \ a short supply of houses 影响了生活水准 a drop in the standard of living （T.S.）--- 高房价 a higher housing price \ the housing price is prohibitive ---购房者 homebuyer 必须支付更多的首付 purchase a home with more down payment 和贷款抵押 mortgage，而居住在租房的人 rent a house 必须支付更高的租金 rent ----- 与住房成本相关的成本会占用每月的预算 budget，并降低人们可以支配的收入 disposable income， 以应付诸如购买家庭开支 family expenses。他们可能处于压力之下 heavy pressure。

住房紧张 the shortage of high –quality housing ------解释: 居住在卫生 poor sanitation、通风 ventilation、隔热 insulation 条件差的建筑物中的人容易感染流感 catch flu， 呼吸道疾

病 respiratory disease，传染病 infectious disease。另外----- 生活在狭窄的环境 cramped condition 中会有高压力水平 high stress hormone\ levels --- 缺乏隐私 lack of privacy、暴露在噪音当中 exposure to noise for a long time----- 所有的问题都会给医疗带来压力 pose a stress\ strain on the medical system ------会有健康问题 health risk ------增加医疗负担 increase the medical cost

住房短缺 --- 贫富差距加大 increase the disparity between the rich and the poor --- 社会不稳定 threaten the social security\ stability 解释： ----低收入者 low income people 必须用收入 earnings 的一部分 a large proportion of 来支付抵押贷款 pay the mortgage 或者租金 rent vs. 富裕家庭 well – off families 拥有很多房产 properties, 可以通过出租一些房子 rent out some of their houses 就可以过上很好的生活 live a\ an + adj. + life \ live comfortably ------ 经济上的分歧可能导致反社会行为 anti-social behavior 和对上层阶级的犯罪增加 crime against the upper class ----- 政府无力解决该问题 fail to address the problem, 人们会憎恨政府 feel resentful to

解决措施

增加土地供应 increase the land supply ---- 多建房子 allow for more housing development projects ----拆除 tear down\ pull down\knock down 市中心地区的一些废弃建筑 dilapidated 来 building 实现 be achieved by, 从而使得房地产公司 real estate companies 可以在那里建造一些住宅区 residential areas \ housing blocks。-----在城市的边缘 on the edge of the city 建立一些新的住房区 create some new housing areas，并且建立交通系统 build transport links, 使得人们能够轻松的从家到办公室 allow people to travel easily from home to the central office--在大城市 megacity\ metropolitan\ cosmopolitan 的附近 close to、proximity 设计 design 一些卫星城 satellite towns, 因此那些买不起第一套房子的人可以住在那里。People who have difficulties in affording the first home can live there. ----住房危机 tackle the housing crisis

提高福利房 state\ council houses ----政府可以利用房地产业 housing industry 的部分税收 tax

revenue 来建造住宅 construct buildings-----有资格 be eligible to 参与这项计划 join the programme 的家庭可以住在这种补贴住宿 subsidize accommodation，而无需承担巨大的费用 without bearing a huge cost。-----让穷人 people who earn insufficient income 有房子住 get on the property ladder ---- 解决住房危机

颁布法律 pass the laws\ develop the policy 限制一个家庭拥有的房屋的数量 limit the number of houses， 防止富裕家庭购买大量的房产 prevent wealthy households purchasing a large number of properties， 超出限制 limit is exceeded， 还可以对家庭拥有的额外房产进行征税 impose\ levy tax on 避免市场不当的投机行为 curb speculative investment in housing industry 富人减少买房，房价下调， 穷人可以买得起房。 部分富裕家庭的资金可以用来资助公屋 finance council housing，这个公屋可以想穷人提供 financially disadvantaged family-----解决住房危机
