按静态图句型写表格开头段：
Answer:

_____

_____

紫藤雅思

***The graph and table below give information about water use worldwide and water consumption in two different countries.***

两句全放在开头段中：

The graph illustrates how the amount of water consumption by sector changed between 1900 and 2000. The table shows the differences in water consumption in Brazil and the Democratic Republic of Congo in 2000.

紫藤雅思

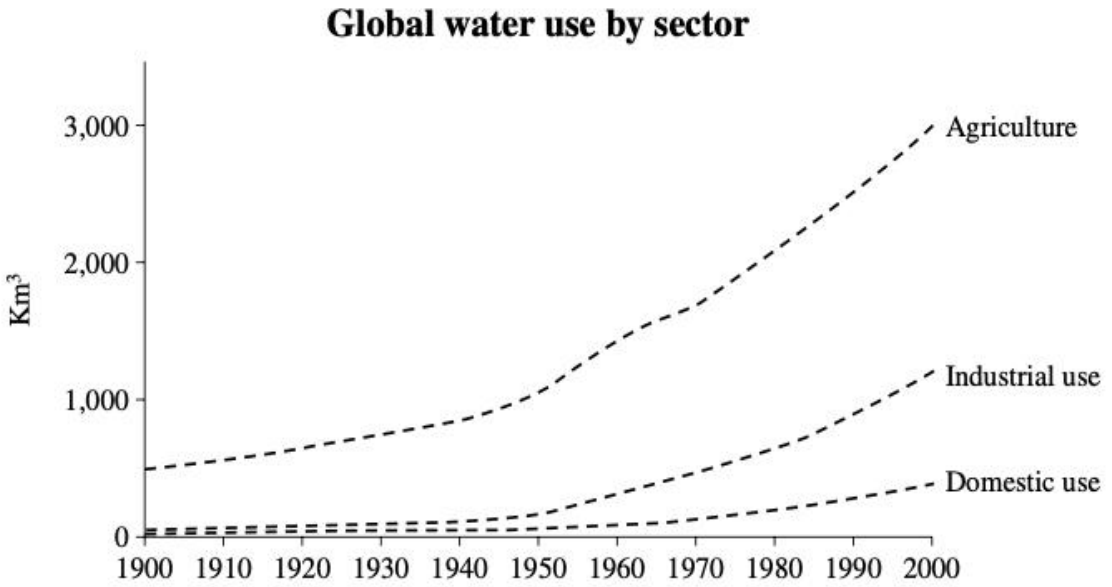

# 3.2 概述段写作

紫藤雅思

# 3.2 概述段写作

**Water consumption in Brazil and Congo in 2000**

| Country | Population | Irrigated land | Water consumption per person |
|---|---|---|---|
| Brazil | 176 million | 26,500 $km^2$ | 359 $m^3$ |
| Democractic Republic of Congo | 5.2 million | 100 $km^2$ | 8 $m^3$ |

按动态图句型写线图概述段：

Answer:

按静态图句型写表格概述段：

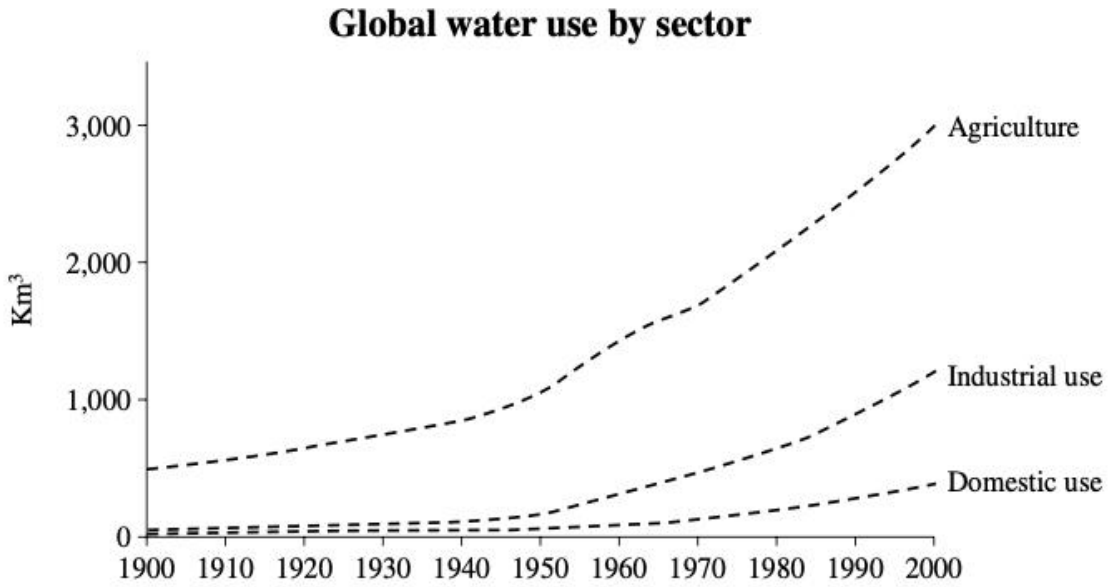

Answer:

紫藤雅思

# 3.2 概述段写作

**Water consumption in Brazil and Congo in 2000**

| Country | Population | Irrigated land | Water consumption per person |
|---|---|---|---|
| Brazil | 176 million | 26,500 $km^2$ | 359 $m^3$ |
| Democractic Republic of Congo | 5.2 million | 100 $km^2$ | 8 $m^3$ |

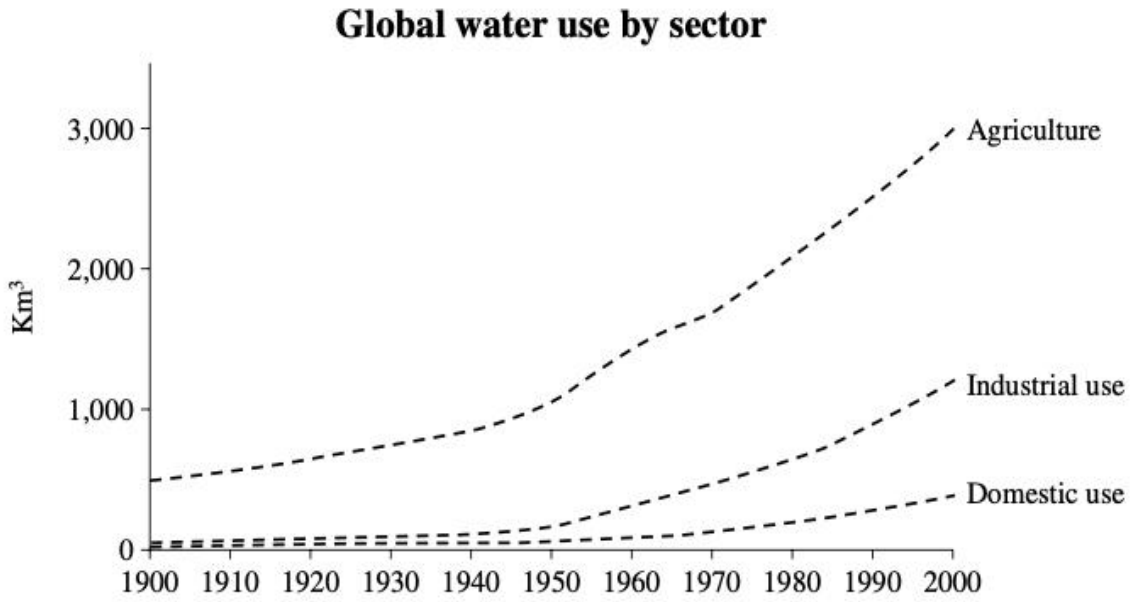

两句全放在概述段中：

Overall, it is clear that water consumption by agriculture, industrial use and domestic use **all rose**, but the **degree of increase varied**. The two countries in question **shared similar patterns** of water consumption on the given three categories, but **had differences in specific values**.

紫藤雅思

# 3.3 分段和要点写作

紫藤雅思

按动态图句型描述线图：

Answer:

紫藤雅思

**Water consumption in Brazil and Congo in 2000**

| Country | Population | Irrigated land | Water consumption per person |
|---|---|---|---|
| Brazil | 176 million | 26,500 $km^2$ | 359 $m^3$ |
| Democractic Republic of Congo | 5.2 million | 100 $km^2$ | 8 $m^3$ |

按静态图句型描述表格：

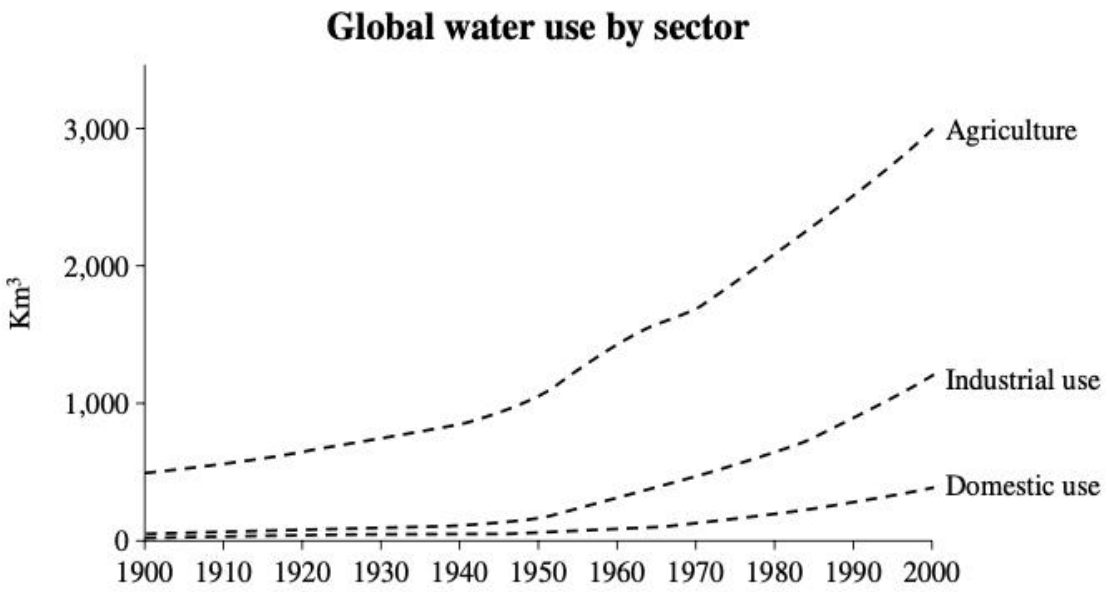

Answer:

紫藤雅思

# 3.3 分段和要点写作

**Water consumption in Brazil and Congo in 2000**

| Country | Population | Irrigated land | Water consumption per person |
|---|---|---|---|
| Brazil | 176 million | 26,500 $km^2$ | 359 $m^3$ |
| Democractic Republic of Congo | 5.2 million | 100 $km^2$ | 8 $m^3$ |

_____ _____that water consumption in agriculture rose dramatically from about 500 $km^3$ to around 3, 000 $km^3$ in the year 2000. Water consumption in the industrial and domestic sectors also increased, but the consumption remained stable between 1900 and 1930. After that, industrial use grew gradually to just over 1,000 $km^3$, while domestic use rose more slowly to only 300 $km^3$.

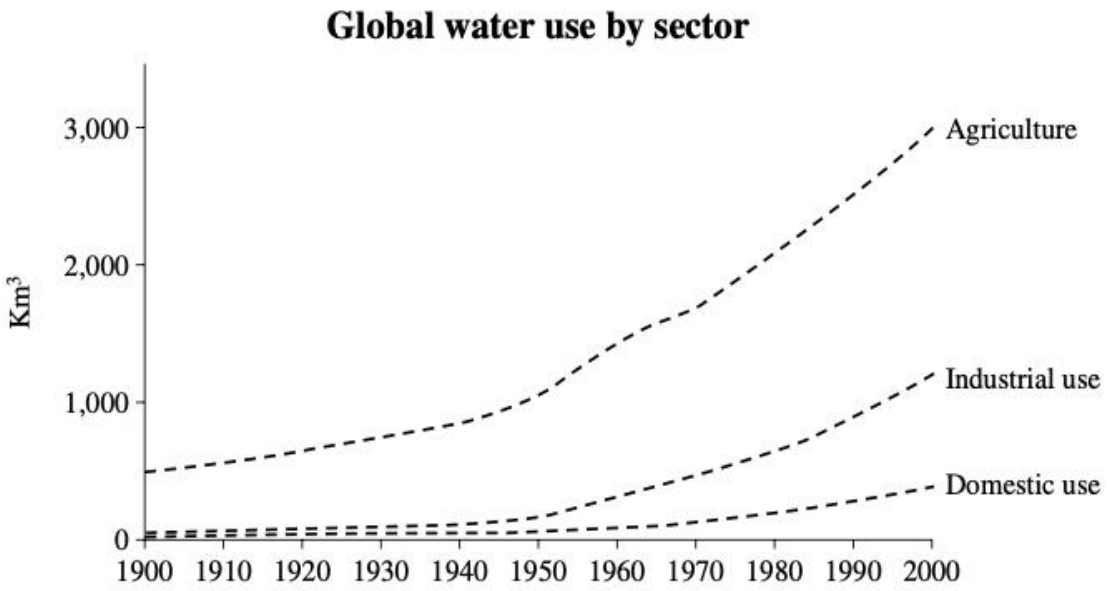

_____ _____the population of Brazil was very large, at 176 million. In contrast, the population of the Congo was very small, at only 5.2 million. Also, Brazil had more irrigated land than the Congo (26,500 $km^2$ and 100 $km^2$ respectively). So water consumption per person in Brazil was significantly larger than the Congo ( 359$m^3$ and 8$m^3$ each).

紫藤雅思

# 3.3 分段和要点写作

**Water consumption in Brazil and Congo in 2000**

| Country | Population | Irrigated land | Water consumption per person |
|---|---|---|---|
| Brazil | 176 million | 26,500 $km^2$ | 359 $m^3$ |
| Democractic Republic of Congo | 5.2 million | 100 $km^2$ | 8 $m^3$ |

Looking at the graph first, water consumption in agriculture rose dramatically from about 500 $km^3$ to around 3, 000 $km^3$ in the year 2000. Water consumption in the industrial and domestic sectors also increased, but the consumption remained stable between 1900 and 1930. After that, industrial use grew gradually to just over 1,000 $km^3$, while domestic use rose more slowly to only 300 $km^3$.

Turning to the table, it is clear that the population of Brazil was very large, at 176 million. In contrast, the population of the Congo was very small, at only 5.2 million. Also, Brazil had more irrigated land than the Congo (26,500 $km^2$ and 100 $km^2$ respectively). So water consumption per person in Brazil was significantly larger than the Congo ( 359$m^3$ and 8$m^3$ each).

紫藤雅思

# 3.2 概述段写作

紫藤雅思

概述段常用句型：

- There are ____ main/major stages in doing sth, beginning with doing sth and ending with doing sth.
- The process of doing sth is complex / simple, which entails/involves ___ main / major stages in total. The whole process begins/starts with doing sth and ends with doing sth.

紫藤雅思

Sample 1:

Overall, it is clear that there are six major stages in producing olive oil, beginning with picking the olives and ending with separating oil from water before storing or selling the final product to customers.

Sample 2:

Overall, it is clear that the process of making olive oil is not very complex, which only entails six major stages. The whole process begins with picking the olives and ending with separating oil from water before storing or selling the final product to customers.

紫藤雅思

# 3.3 主体段写作

First of all, olives, the raw material, are picked from olive trees. Then, the olives are poured into a container that has a lot of cold water. The olives are rinsed so that the dust can be removed. The next stage is to deliver the clean olives to a smashing machine through a belt. After they are smashed, the olive stones and olive paste are put into different containers. The olive paste is packaged into bags that have holes. After that, the bags are put into a machine so that the olive paste is pressed into oil. The following stage is to separate the oil from water. Finally, olive oil is stored or sold.

## 3. 要点挑选

| | 玻璃瓶回收 |
|---|---|
| 基本动作 | collect, transport, rinse, classify, deliver, smash, burn, add, pour, shape, fill |
| 材料和工具 | used glass bottles, high-pressure water, a furnace, a mould |

紫藤雅思

## 3. 全文写作2

The diagram _____ the process of glass bottle-recycling.

Overall, it is clear that the process of recycling glass bottles is rather _____, which entails three major stages. The whole process begins with _____ used glass bottles and ends with _____ them with drinks before selling the final products in supermarkets.

First of all, used glass bottles are collected in collection points and then _____ to a factory. The next stage is to use high-pressure water to _____ the bottles so that the dust can be _____. Then, they are _____ into three colours: clear, brown and green. Next, the bottles are _____ into glass pieces. After that, they are _____ into liquid in a furnace, 600o C-800o C. When the recycled liquid glass is poured into a glass mould, new liquid glass is _____ as well so that a new glass bottle can be made. The final stage is to fill drinks into the new bottles. After the final products are transported to supermarkets, they are ready for _____.

紫藤雅思

## 3. 全文写作2

The diagram illustrates the process of glass bottle-recycling.

Overall, it is clear that the process of recycling glass bottles is rather complex, which entails three major stages. The whole process begins with collecting used glass bottles and ends with filling them with drinks before selling the final products in supermarkets.

First of all, used glass bottles are collected in collection points and then transported to a factory. The next stage is to use high-pressure water to rinse the bottles so that the dust can be removed. Then, they are classified into three colours: clear, brown and green. Next, the bottles are smashed into glass pieces. After that, they are burned into liquid in a furnace, 600o C-800o C. When the recycled liquid glass is poured into a glass mould, new liquid glass is added as well so that a new glass bottle can be made. The final stage is to fill drinks into the new bottles. After the final products are transported to supermarkets, they are ready for sale.
