The map below is of the town of Garlsdon. A new supermarket (S) is planned for the town. The map shows two possible sites for the supermarket.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

The map illustrates two feasible locations for a new supermarket of the city G.

S1 lies in the north-west of countryside which is 12km to H. Though s1 is far from B, C and housing, people can still get there by railway and by three main roads. The supermarket can establish the parking area and other infrastructure because it has an adequate space.

On the contrary, S2 is located in the south of town center where is rounded by the housing. The other three citizens can arrive there simply by the transportation. So it has a large number of clients. However, there is a serious/deadly problem with no traffic zone. That means there is any transportation in the town center. It is not convenient for people to carry heavy goods.

Over all, both S1 and S2 are not perfect choice, but S1 offers more advantages than S2 to the population of G.
