填空题（笔记填空）

阅读基本做题步骤

1.略读文章（Skimming）：快速浏览文章标题与段落首句，了解文章的主题、结构和中心思想。

2.浏览题目的类型: 填空、判断、选择...； 根据题目类型（顺序乱序、考察范围）确定做题方法

3.扫读定位（Scanning）：标记题目的关键词，在文章中快速找到相关的段落与句子

4.细读答案句（Reading for detail）：仔细阅读定位到的句子，理解其意思

5.填写答案：比较答案句意思与题目内容，确定答案

紫藤雅思

略读与扫读

略读

目标： 快速理解文章大意，行文结构，提高阅读速度和理解力。

方法：:快速阅读，无需查字典或纠结于语法细节。

扫读（精读）

目标：深入理解文本的细节，学习词汇、语法和深层含义。
方法：深入分析句子结构、词汇含义和文章逻辑。

Skimming – 略读的核心

1. 抓取句子的主干信息
2. 复杂句中主句是重点
3. 没有必要阅读或理解所有内容
4. 目的是寻找大意或主旨
5. 对文章的结构有一个整体概念

核心能力

1. 关键词的定位功能（定位词）
2. 关键词的同义替换（同替词）
3. 关键词的考点辨识 （逻辑词+常见考点）

Part of Speech 词性

There are **7** main parts of speech.

1. Nouns & Pronouns

Nouns are people, places, or things.

- woman
- student
- dog
- house
- city
- book
- table
- phone
- apple

Pronouns are words that can take a noun's place.

- I
- you
- she
- he
- we
- they
- me
- him
- us
- mine
- theirs
- myself

Nouns and pronouns can be subjects (S) or objects (O) of a sentence. Subjects come **before the verb** (V) and objects come **after the verb**.

Examples:

- **People** like **him**.
  S V O
- The **girl** ate an **apple**.
  S V O
- **She** went to **Hawaii**.
  S V O

2. Verbs

Verbs are actions.

- run
- walk
- sing
- study
- buy
- talk
- swim
- be
- have

Verbs come **after the subject** in a sentence.

Examples:

- My sister **jogs**.
- He **buys** milk once a week.
- Jane **is** a teacher.

3. Articles

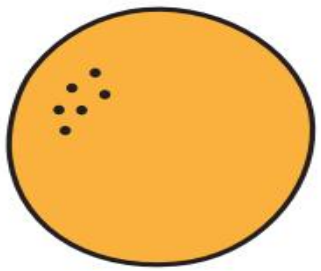

Articles give information about nouns (how many, general or specific, etc.).

- a
- an
- the

Articles come **before a noun**.

Examples:

- **a** puppy
- **an** orange
- **the** books

4. Adjectives

Adjectives describe nouns (size, color, feeling, etc.).

- big
- warm
- tall
- soft
- comfortable
- green
- happy
- tired
- exciting

Adjectives come **before a noun** or **after the Be verb**.

Examples:

- I see a **yellow** flower.
- The flower is **yellow**.

5. Adverbs

Adverbs describe verbs (how, how often, etc.). Most adverbs end in *-ly*.

- quickly
- loudly
- messily
- badly
- always
- often
- sometimes
- never

"How" adverbs come **after the verb**.
"How often" adverbs come **before the verb**.

Examples:

- She runs **quickly**. *(How does she run?)*
- He speaks **softly**. *(How does he speak?)*
- They **always** sing. *(How often do they sing?)*
- My brother **never** watches TV. *(How often does he watch TV?)*

6. Prepositions

Prepositions give information about nouns (direction, time, place, etc.).

- in
- on
- at
- to
- over
- around
- under
- between

Prepositions come **before a noun**.

Examples:

- **to** school
- **in** July
- **at** home

7. Conjunctions

Conjunctions join two sentences or two similar parts of speech.

fanboys

- for
- and
- nor
- but
- or
- yet
- so

Conjunctions come **between** two nouns, two verbs, two adjectives, two adverbs, or two sentences.

Examples:

- I love **cake and ice cream**.
- You can **call or text** me.
- Our cat is **cute and lazy**.
- The ballerina dances **beautifully and gracefully**.
- She **brushes her teeth and washes her face** before bed.
- **My brother likes Tracy, but he never says a word to her.**

Tip:

Remember common conjunctions easily with the word "fanboys" (it uses the first letter from each conjunction).

Short Forms:

- Noun = N
- Verb = V
- Adjective = Adj
- Preposition = Prep
- Pronoun = Pn
- Article = Art
- Adverb = Adv
- Conjunction = Conj

连词(conjunction)也叫连接词，通常分为并列连词(coordinating conjunction)和从属连词(subordinating conjunction), 前者包括and, but, or等，后者包括when, because, if等。

今天聊天最常见的7个并列连词，for, and, nor, but, or, yet, so, 简记为"fanboys"，每个连词都有各自的意思，比如 and/和、for/因为、but/但是、so/所以、for/因为、nor/也不(通常和neither搭配用，构成关联连词neither...nor)。

FANBOYS = FOR, AND, BUT, OR, YET, SO.

READING PASSAGE 1

*You should spend about 20 minutes on **Questions 1–13**, which are based on Reading Passage 1 below.*

THE STORY OF SILK

The history of the world's most luxurious fabric, from ancient China to the present day

Silk is a fine, smooth material produced from the cocoons – soft protective shells – that are made by mulberry silkworms (insect larvae). Legend has it that it was Lei Tzu, wife of the Yellow Emperor, ruler of China in about 3000 BC, who discovered silkworms. One account of the story goes that as she was taking a walk in her husband's gardens, she discovered that silkworms were responsible for the destruction of several mulberry trees. She collected a number of cocoons and sat down to have a rest. It just so happened that while she was sipping some tea, one of the cocoons that she had collected landed in the hot tea and started to unravel into a fine thread. Lei Tzu found that she could wind this thread around her fingers. Subsequently, she persuaded her husband to allow her to rear silkworms on a grove of mulberry trees. She also devised a special reel to draw the fibres from the cocoon into a single thread so that they would be strong enough to be woven into fabric. While it is unknown just how much of this is true, it certainly known that silk cultivation has existed in China for several millennia.

Originally, silkworm farming was solely restricted to women, and it was they who were responsible for the growing, harvesting and weaving. Silk quickly grew into a symbol of status, and originally, only royalty were entitled to have clothes made of silk. The rules were gradually relaxed over the years until finally during the Qing Dynasty (1644–1911 AD), even peasants, the lowest caste, were also entitled to wear silk. Sometime during the Han Dynasty (206 BC–220 AD), silk was so prized that it was also used as a unit of currency. Government officials were paid their salary in silk, and farmers paid their taxes in grain and silk. Silk was also used as diplomatic gifts by the emperor. Fishing lines, bowstrings, musical instruments and paper were all made using silk. The earliest indication of silk paper being used was discovered in the tomb of a noble who is estimated to have died around 168 AD.

[illegible] Initially, eventually creating [illegible] trade route now known as the Silk Road, taking silk westward and bringing gold, silver and wool to the East. It was named the Silk Road after its most precious commodity, which was considered to be worth more than gold. The Silk Road stretched over 6,000 kilometres from Eastern China to the Mediterranean Sea, following the Great Wall of China, climbing the Pamir mountain range, crossing modern-day Afghanistan and going on to the Middle East, with a major trading market in Damascus. From there, the merchandise was shipped across the Mediterranean Sea. Few merchants travelled the entire route; goods were handled mostly by a series of middlemen.

With the mulberry silkworm being native to China, the country was the world's sole producer of silk for many hundreds of years. The secret of silk-making eventually reached the rest of the world via the Byzantine Empire, which ruled over the Mediterranean region of southern Europe, North Africa and the Middle East during the period 330–1453 AD. According to another legend, monks working for the Byzantine emperor Justinian smuggled silkworm eggs to Constantinople (Istanbul in modern-day Turkey) in 550 AD, concealed inside hollow bamboo walking canes. The Byzantines were as secretive as the Chinese, however, and for many centuries the weaving and [illegible] was a strict imperial monopoly. [illegible] seventh century, the Arabs conquered Persia, capturing their magnificent silks in the process. Silk production thus spread through Africa, Sicily and Spain as the Arabs swept through these lands. Andalusia in southern Spain was Europe's main silk-producing centre in the tenth century. By the thirteenth century, however, Italy had become Europe's leader in silk production and export. Venetian merchants traded extensively in silk and encouraged silk growers to settle in Italy. Even now, silk processed in the province of Como in northern Italy enjoys an esteemed reputation.

The nineteenth century and industrialisation saw the downfall of the European silk industry. Cheaper Japanese silk, trade in which was greatly facilitated by the opening of the Suez Canal, was one of the many factors driving the trend. Then in the twentieth century, new manmade fibres, such as nylon, started to be used in what had traditionally been silk products, such as stockings and parachutes. The two world wars, which interrupted the supply of raw material from Japan, also stifled the European silk industry. After the Second World War, Japan's silk production was restored, with improved production and quality of raw silk. Japan was to remain the world's biggest producer of raw silk, and practically the only major exporter of raw silk, until the 1970s. However, in more recent decades, China has gradually recaptured its position as the world's biggest producer and exporter of [illegible] silk and silk yarn. Today, around 125,000 metric tons of silk are produced in the world, and almost two thirds of that production takes place in China.

  - e.g. evidence found of **6** ..... made from silk around 168 AD

Silk reaches rest of world

- Merchants use Silk Road to take silk westward and bring back **7** ..... and precious metals
- 550 AD: **8** ..... hide silkworm eggs in canes and take them to Constantinople
- Silk production spreads across Middle East and Europe
- 20th century: **9** ..... and other manmade fibres cause decline in silk production

预测答案：

1. 名词；内容—人拥有的物品
2. 名词，可数单数，工具
3. 名词，复数可数，人
4. 名词，复数可数，人
5. 名词，人们使用的一类物品
6. 名词，用丝绸制作的一类物品
7. 名词，人们贸易的一类物品
8. 名词，人
9. 名词，某类纤维

题目精讲

C11T3Q1-9 P67 (complete the notes)

Q1 作为文章第一题，并且是顺序题，先从第一段找，根据时间3000BC快速定位到L6，再匹配其它关键词精准定位，通过fell into/landed in, 结合预测， 出答案tea.

Q2 接着第一题往后找，根据空格前的a预判答案是一个可数单数n.,同替invented/devised出答案reel, 后面的pull out/draw the fibres from进一步确认

Q3 预判出答案是复数，人，加上绝对化考点only，找到P2首句，allow/were restricted to快速得答案women

Q4 预判和考点同上题，快速找到答案royalty, allow/were entitled to

Q5 as a form of/as a unit of 快速出答案currency

Q6 时间168AD快速定位，found/discovered出答案paper

Q7 Silk Road快速定位到P3首句，bring重现，快速出答案wool，而precious metals/gold silver

Q8 时间，大写专有n.快速定位到P4段中，加上silkworm eggs重现，预判答案属性为人并且复数出答案monks

Q9 时间20th century/twentieth centurym, 快速定位到末段，manmade fibres重现，出答案nylon

Questions 10–13

Do the following statements agree with the information in Reading Passage 1?

In boxes 10–13 on your answer sheet, write

TRUE	*if the statement agrees with the information*
FALSE	*if the statement contradicts the information*
NOT GIVEN	*if there is no information on this*

10 Gold was the most valuable material transported along the Silk Road.

11 Most tradesmen only went along certain sections of the Silk Road.

12 The Byzantines spread the practice of silk production across the West.

13 Silk yarn makes up the majority of silk currently exported from China.

做判断题：把所有判断题一次读完，划关键词；拿关键词定位文章出处，理解句子意思，确定为答案句；比较答案句与题目意思，进行判断。

后面课程会有判断题专项

Questions 10–13

Do the following statements agree with the information in Reading Passage 1?

In boxes 10–13 on your answer sheet, write

TRUE	*if the statement agrees with the information*
FALSE	*if the statement contradicts the information*
NOT GIVEN	*if there is no information on this*

10 Gold was the most valuable material transported along the Silk Road.

11 Most tradesmen only went along certain sections of the Silk Road.

12 The Byzantines spread the practice of silk production across the West.

13 Silk yarn makes up the majority of silk currently exported from China.

做判断题：把所有判断题一次读完，划关键词；拿关键词定位文章出处，理解句子意思，确定为答案句；比较答案句与题目意思，进行判断。

10. 根据Gold回忆到填空题第7题的答案句即P3首句，初步答案句就在附近，读相连2句，根据与题目意思比较，原文意思是silk road运输沿途最有价值材料是silk，因此判断为F.

11. 接着上一题的答案句往下找关键词，下一句讲silk road的范围，往下扫读到本段最后一句发现merchants/tradesmen, 比较原文句子与题目意思，属于反话正说，是一个意思，因此判断为T.

12. 根据Byzantines快速定位到P4L6, 往后细读到倒数L9，本句意思特别是secretive，可以初步与题目意思比较呈相反，再往后读一句再次确定把silk传播到西方的不是Byz（而是Abrabs), 因此判断为F.

13. 根据关键词currently推断大概出处在文末（因为全文结构按时间顺序写）且文中替换的时间可能是比较接近现在的具体年代，快速定位到末段的1970s, 结合China, 往后读，原文并没说silk yarn出口占比信息，题目绝对词majority与原文不相关，因此判断为NG.

语言知识点-句子类别

句子分类

- 简单句：只有一套主语和谓语关系的句子。

  e.g. Jerry bought a novel.

- 并列句：以and/but连接的多套主谓关系，句子之间是平行非辅助结构。

  e.g. Jerry went to a bookshop and bought a novel.

- 复合句：带有从句的句子。

  e.g. Jerry liked the novel he bought yesterday.

句子分类

判断以下句子类型（简单句、并列句、复合句）。

1. He introduced lead to the raw materials. (1281)
2. Southern Rajasthan suffered an eight-year drought between 1996 and 2004. (1011)
3. On the fourth side, verandas which are supported by ornate pillars overlook the steps. (1011)
4. One of the most popular was an interview with former New Zealand All Blacks rugby captain Tana Umaga. (1311)
5. Dowman used Cutty Sark as a training ship, and she continued in this role after his death. (1341)

The life and work of Marie Curie

Marie Curie is probably the most famous woman scientist who has ever lived. Born Maria Sklodowska in Poland in 1867, she is famous for her work on radioactivity, and was twice a winner of the Nobel Prize. With her husband, Pierre Curie, and Henri Becquerel, she was awarded the 1903 Nobel Prize for Physics, and was then sole winner of the 1911 Nobel Prize for Chemistry. She was the first woman to win a Nobel Prize.

From childhood, Marie was remarkable for her prodigious memory, and at the age of 16 won a gold medal on completion of her secondary education. Because her father lost his savings through bad investment, she then had to take work as a teacher. From her earnings she was able to finance her sister Bronia's medical studies in Paris, on the understanding that Bronia would, in turn, later help her to get an education.

In 1891 this promise was fulfilled and Marie went to Paris and began to study at the Sorbonne (the University of Paris). She often worked far into the night and lived on little more than bread and butter and tea. She came first in the examination in the physical sciences in 1893, and in 1894 was placed second in the examination in mathematical sciences. It was not until the spring of that year that she was introduced to Pierre Curie.

Their marriage in 1895 marked the start of a partnership that was soon to achieve results of world significance. Following Henri Becquerel's discovery in 1896 of a new phenomenon, which Marie later called 'radioactivity', Marie Curie decided to find out if the radioactivity discovered in uranium was to be found in other elements. She discovered that this was true for thorium.

Turning her attention to minerals, she found her interest drawn to pitchblende, a mineral whose radioactivity, superior to that of pure uranium, could be explained only by the presence in the ore of small quantities of an unknown substance of very high activity. Pierre Curie joined her in the work that she had undertaken to resolve this problem, and that led to the discovery of the new elements, polonium and radium. While Pierre Curie devoted himself chiefly to the physical study of the new radiations, Marie Curie struggled to obtain pure radium in the metallic state. This was achieved with the help of the chemist André-Louis Debierne, one of Pierre Curie's pupils. Based on the results of this research, Marie Curie received her Doctorate of Science, and in 1903 Marie and Pierre shared with Becquerel the Nobel Prize for Physics for the discovery of radioactivity.

The births of Marie's two daughters, Irène and Eve, in 1897 and 1904 failed to interrupt her scientific work. She was appointed lecturer in physics at the École Normale Supérieure for girls in Sèvres, France (1900), and introduced a method of teaching based on experimental demonstrations. In December 1904 she was appointed chief assistant in the laboratory directed by Pierre Curie.

The sudden death of her husband in 1906 was a bitter blow to Marie Curie, but was also a turning point in her career: henceforth she was to devote all her energy to completing alone the scientific work that they had undertaken. On May 13, 1906, she was appointed to the professorship that had been left vacant on her husband's death, becoming the first woman to teach at the Sorbonne. In 1911 she was awarded the Nobel Prize for Chemistry for the isolation of a pure form of radium.

During World War I, Marie Curie, with the help of her daughter Irène, devoted herself to the development of the use of X-radiography, including the mobile units which came to be known as 'Little Curies', used for the treatment of wounded soldiers. In 1918 the Radium Institute, whose staff Irène had joined, began to operate in earnest, and became a centre for nuclear physics and chemistry. Marie Curie, now at the highest point of her fame and, from 1922, a member of the Academy of Medicine, researched the chemistry of radioactive substances and their medical applications.

In 1921, accompanied by her two daughters, Marie Curie made a triumphant journey to the United States to raise funds for research on radium. Women there presented her with a gram o radium for her campaign. Marie also gave lectures in Belgium, Brazil, Spain and Czechoslovakia and, in addition, had the satisfaction of seeing the development of the Curie Foundation in Paris, and the inauguration in 1932 in Warsaw of the Radium Institute, where her sister Bronia became director.

One of Marie Curie's outstanding achievements was to have understood the need to accumulate intense radioactive sources, not only to treat illness but also to maintain an abundant supply for research. The existence in Paris at the Radium Institute of a stock of 1.5 grams of radium made a decisive contribution to the success of the experiments undertaken in the years around 1930. This work prepared the way for the discovery of the neutron by Sir James Chadwick and, above all, for the discovery in 1934 by Irène and Frédéric Joliot-Curie of artificial radioactivity. A few months after this discovery, Marie Curie died as a result of leukaemia caused by exposure to radiation. She had often carried test tubes containing radioactive isotopes in her pocket, remarking on the pretty blue-green light they gave off.

Her contribution to physics had been immense, not only in her own work, the importance of which had been demonstrated by her two Nobel Prizes, but because of her influence on subsequent generations of nuclear physicists and chemists.

In boxes 1–6 on your answer sheet, write

TRUE	*if the statement agrees with the information*
FALSE	*if the statement contradicts the information*
NOT GIVEN	*if there is no information on this*

1 Marie Curie's husband was a joint winner of both Marie's Nobel Prizes.

2 Marie became interested in science when she was a child.

3 Marie was able to attend the Sorbonne because of her sister's financial contribution.

4 Marie stopped doing research for several years when her children were born.

5 Marie took over the teaching position her husband had held.

6 Marie's sister Bronia studied the medical uses of radioactivity.
